### **MESSAGE**

It gives me great pleasure to present this report on the National Industrial Survey 2019/20, which includes four NSIC sections for the first time in Nepal: mining and quarrying (B), manufacturing (C), electricity, gas, steam, and air conditioning supply (D), and water supply, sewerage, waste management, and remediation activities (E). This report is comparable to previous results of the National Census of Manufacturing Establishments and Survey of Small Manufacturing Establishments.

Broad-based economic growth is the sole objective of the government of Nepal. Reliable statistical results of a nationally representative survey can support the monitoring and evaluation of industrial development in the country. The results of this survey will indeed be helpful in assessing the industrial production pattern and structural changes. I am confident that we now have ample opportunity to evaluate periodic plans and economic development issues using this wealth of information. I humbly urge all policy makers, planners, analysts, academia, researchers, private sector, and investors to come forward and help the country benefit from this information. In addition to this, the report can be a very useful reference for private sectors and investors to assess their opportunities in Nepalese industrial sectors.

In the meantime, I'd like to thank the chair and members of the National Industrial Survey 2019/20 steering committee and technical committee for their invaluable contributions. Last but not least, I appreciate and would like to thank all of the Central Bureau of Statistics staff who worked extremely hard and contributed significantly to the success of this survey. Thank you also to the individuals from the industrial sector who have provided direct and indirect assistance with report preparation.

### **FOREWORD**

It gives me great pleasure to say a few words about the release of Nepal's National Industrial Survey 2019/20 report. For the first time, this survey includes both small and large establishments from four Nepal Standard Industrial Classification (NSIC) sections, namely B: Mining and quarrying; C: Manufacturing; D: Electricity, gas, steam, and air conditioning supply; and E: Water supply, sewerage, waste management, and remediation activities. It has a broad scope and significance in that it provides disaggregated information on the various characteristics of the aforementioned Nepalese industrial establishments.

The findings in this report are also comparable to previous findings from the National Census of Manufacturing Establishments and the Survey of Small Manufacturing Establishments. The results of this survey are critical in the government's development planning, monitoring, and evaluation of development programs and activities. I hope that the survey's extensive information will be very useful for planners, policymakers, researchers and academia, development partners, private sectors, civil societies and investors in formulating evidence based policies and managing development programs.

The Central Bureau of Statistics (CBS) is appreciated for the efforts put in to conduct this survey and produce this valuable report. In the meantime, as a chair of National Industrial Survey Steering Committee, I'd like to thank all the members of the steering committee and entire team of technical committee for their invaluable guidance and contributions throughout the survey. I'd also like to convey my heartfelt thanks to Director General Mr. Nebin Lal Shrestha and rest of the staff of CBS for successfully bringing out the report and making this survey a success. Finally, I'd also like to thank all the other stakeholders who contributed both directly and indirectly to the completion of this survey.

### **PREFACE**

Central Bureau of Statistics has been collecting and disseminating the official industrial statistics of the country through different censuses and surveys. In the previous censuses and surveys of its kind, only manufacturing establishments were taken under the scope. The scope of the industrial survey has been extended to the other three sectors of the economy as per the industrial statistics guidelines and methodology published by the United Nations Industrial Development Organization (UNIDO). These sectors are: 1. Mining and quarrying. 2. Electricity, gas, steam and air conditioning supply and 3. Water supply, sewerage, waste management, and remediation activities. This survey, named National Industrial Survey 2019/20, is, therefore, the first integrated and comprehensive survey of the industrial sector in Nepal in terms of industrial statistics.

It contains detailed information on persons engaged, employment, fixed assets, wages/salaries, input, output, value added, purchase and sales of commodities by central product classification, stocks, social security, safety measure etc. by various industrial classifications disaggregated at the provincial level. I believe that policymakers, planners, industrialists, researchers, and a wide range of other national and international agencies will find the survey results to be a valuable primary source of industrial statistics for their own diverse purposes and interests.

I'd like to take this opportunity to thank the members of the technical committee, as well as all staff and officials of the Central Bureau of Statistics involved in the survey, led by Director General Mr. Nebin Lal Shrestha, for their outstanding efforts.

## **ACKNOWLEDGEMENT**

The first census of manufacturing establishments in Nepal was conducted in the year 2022 BS. The census included all manufacturing establishments with ten or more employees. Such censuses were carried out every five years until the year 2068 BS, which was the tenth in its series. Survey of small manufacturing establishments with less than ten employees were conducted once in every ten years using sample selection technique. Recognizing the need for an integrated industrial survey, this survey attempted for the first time in Nepal to cover all four sections of the Nepal Standard Industrial Classification (NSIC), namely: mining and quarrying (B), manufacturing (C), electricity, gas, steam, and air conditioning supply (D), and water supply, sewerage, waste management, and remediation activities (E). This is consistent with the guidelines and methodology for industrial statistics published by the United Nations Industrial Development Organization (UNIDO).

A probability sample design was implemented for the selection of small manufacturing establishments under section C, whereas a complete enumeration, i.e., a census, was carried out for the remaining establishments of NSIC Sections B, C, D, and E.

I am extremely grateful to the honorable vice-chairman of the National Planning Commission, Dr. Biswo Nath Poudel, the chair and members of the steering committee, led by honorable member Dr. Ram Kumar Phuyal, the secretary of the National Planning Commission, Mr. Kewal Prasad Bhandari for their invaluable guidance in ensuring the survey's success.

I would also like to thank members of the technical committee for their invaluable inputs during questionnaire design, field implementation and report preparation. My heartfelt thanks go to Dr. Hem Raj Regmi and Mr. Dilli Raj Joshi, deputy director generals, for their overall guidance and management of the survey.

I appreciate the efforts made by directors Mr. Rajesh Dhital and Mr. Binod Sharan Acharya, who played a prime role in implementing the survey. Former director Ms. Saroj Bhattarai, statistics officers Mr. Jitendra Ranabhat and Mr. Bipin Kumar Panjiyar, the then statistics officer, Mr. Surendra Rawal, computer officer Mr. Suresh Prasad Kayastha, and statistics assistant Mr. Ashok Neupane deserve thanks for their contributions at various stages of the survey's implementation.

The directors and officers of the 33 statistics offices have played a leading role in field supervision and field management of the survey. I heartily appreciate it.

My sincere thanks go to the Federation of Nepalese Chambers of Commerce & Industry (FNCCI) and Confederation of Nepalese Industries (CNI) members who supported the survey data collection and provided feedback and suggestions to make this survey a success. Last but not least, I must recognize the contributions of our enumerators, supervisors, and survey respondents, without whom this study would not have been possible. I want to thank them all.

This report is designed to provide reliable information on the subject matter covered, like employment, wages and salaries, fixed assets, output and input composition, value added etc. I hope the findings from this survey will meet the demands of various planners, policy makers, researchers, industrialists, and different national and international agencies who are interested in the industrial development of Nepal.

CBS always welcomes comments and suggestions from its readers that would be valuable for our similar publications in the future.

# CHAPTER I

## SURVEY METHODOLOGY

### 1.1 Introduction

Central Bureau of Statistics (CBS) has been producing National Account estimates and other macro-economic indicators of the country from sector wise economic activities. Agriculture sector occupies largest share 23.95%, (CBS 2022) in the national economy in terms of GDP. The share of the industrial sector to total GDP is around 8.11% (CBS, 2022). Among the industrial sectors, the manufacturing sector (section C of NSIC) covers around 5.65% of the GDP; the Electricity, gas, steam and air conditioning supply (section D of NSIC), the mining and quarrying (section B of NSIC) and Water supply, sewerage, waste management and remediation activities (section E of NSIC) cover around 1.37%, 0.58% and 0.51% of the total GDP respectively. The development of the industrial sector is considered essential because it can contribute not only to expansion of the industrial sector but also affects other sectors of the economy, which in turns supports in poverty alleviation through employment generation and income expansion. Reliable and strong statistical information is thus required to know the current situation of the industrial sector of the country and also for the proper formulation and evaluation of the industrial plans and programs. Keeping this in mind, CBS has been collecting and disseminating the official industrial statistics of the country through regular censuses and surveys.

In the previous industrial censuses and surveys, only the manufacturing establishments were taken under the scope. Now, the scope of industrial survey is extended to other three sectors of the economic activities i.e. Mining and quarrying; Electricity, gas, steam and air conditioning supply; and Water supply, sewerage, waste management and remediation activities. The current National Industrial Survey (NIS) has therefore covered all these four sectors of the economy as defined by the NSIC. This is therefore, the first integrated and comprehensive survey of industrial sector in Nepal, in terms of industrial statistics.

Nepal has a long history of conducting the manufacturing censuses and surveys. The first Census of Manufacturing Establishments (CMEs) was conducted in 1964/65. After that, it was conducted regularly in almost every five years. CMEs had covered those establishments which perform the manufacturing activities and have 10 or more persons engaged. It was continued upto 10<sup>th</sup> CME held in 2011/12. For the establishments with less than 10 persons engaged, CBS had conducted Sample Survey of Small Manufacturing establishments (SSMEs) in every 10 years. Begun in 1972/73, CBS had already conducted the 5th SSMEs in 2008/09. Both CMEs and SSMEs

provide the comprehensive information on number of establishments, total number of employees, wages/salaries, input/output and other information on the manufacturing sector.

This NIS has covered both the large establishments (10 or more persons engaged) and small establishments (less than 10 persons engaged). It also includes other three sectors of the economic activities as mentioned above. The NIS, 2019/20 is the 11th series in terms of census operation whereas it is 6th series in terms of survey operation as in its history.

## **1.2 Objectives**

The broad objective of the NIS 2019/20 is to provide the status and characteristics of industrial sector of the country for policy makers, planners, researchers, industrial communities and other various users.

The specific objectives are to provide:

- the basic structure of industries operating in the reference period,
- statistics on employment in industrial establishments,
- input /output structure of establishments by industrial sector,
- statistics on industrial establishments by provinces, and
- information on environmental aspect of the industrial sector.

## **1.3 Reference Period**

The reference period of NIS 2019/20 is fiscal year 2075/76 (17 July 2018 to 16 July 2019). However, the reference period was fixed at 2075 Magh 1 (Jan 15, 2019) for collecting number of persons engaged in the establishments.

## **1.4 Survey Scope**

Economic activities under section B, C, D and E of NSIC were included in scope of the survey based on following criteria.

- All establishments which were registered at least one government entity, were included in the survey.
- Establishments which were not registered to any government entity but engaging 10 or more persons or at least one paid employee, were also included in the survey. In

other words, all unregistered establishments with less than 10 persons engaged and no paid employee were excluded in the survey. The details of the economic activities that were covered in the survey are listed in annex 1.

### **1.5 Enumeration Units**

The enumeration unit in NIS 2019/20 was considered as an "establishment". The establishment for the purpose of this survey was defined as follows.

*"The establishment is defined as an economic unit that engages under a single ownership or control- that is under a single legal entity-in one or predominantly one kind of economic activity as defined in section B, C, D and E of the NSIC."*

### **1.6 Survey Questionnaires and Manuals**

Initially, a single questionnaire (main questionnaire) was administered for the data collection. After the COVID-19 pandemic, an additional questionnaire was also included in the survey. The main objective of the additional questionnaire was to measure the effects of COVID-19 lockdown (24 March 2020 to 21 July 2020) in industrial sector. Both questionnaires were initially drafted by CBS and finalized by intensive discussion with stakeholders. The major stakeholders participated in discussion programs were government ministries, departments and private sectors such as FNCCI and CNI. The major areas covered by the main and additional questionnaires are as follows.

#### **Contents of main questionnaire:**

- Introductory information about establishments,
- Organizational structure,
- Employment,
- Fuel consumption, water and electricity purchased and sale,
- Purchase of raw materials,
- Production and sale of goods and services,
- Stocks,
- Expenses and income on industrial and non-industrial services,
- Valuation of fixed assets,
- Research and development,
- Utilization of Production capacity,

- Environment and waste management,
- Factors affecting business environment of the establishment, and
- Miscellaneous.

**Contents of additional questionnaire:**

- Operational status of the establishment in the lockdown period,
- Reduction or increment of employees and their wages/salaries in lockdown period,
- Challenges faced by the establishment during the lockdown period,
- Production and sales of establishment before and during lockdown,
- Expectation of policies or programs from the government to reduce the effect of COVID-19 in industrial sector,
- Support/relief received from government, and
- Business plan for coming days etc.

The final questionnaires are presented in annex 2A and 2B.

Comprehensive data collection manuals for both the questionnaires were also prepared. The manuals were used by enumerators and supervisors while collecting data. Concepts and definitions of technical terms, methodology and objective of survey and objectives of each question in the questionnaire were explained in manual.

### **1.7 Pre-test and Pilot Survey**

A number of pre-tests of the draft questionnaire were performed in different parts of the country covering wide varieties of industries in the sections B, C, D and E. The feedbacks obtained from respondents and the issues identified from pretests were incorporated while finalizing questionnaires and manuals.

A pilot survey was also carried out in FY 2075/76 (2017/18). It was conducted in various places covering the different geographic and economic activities. The pilot survey had provided insights the deficiencies that have to be resolved during the main survey. It had also provided the average time taken to fill a questionnaire and estimate of total cost of the survey.

## **1.8 Sample Design**

### **1.8.1 Sampling Frame**

The frame of the survey was developed basically from the list of the National Economic Census (NEC) 2018. The list of establishments from NEC 2018 contains the complete name and address of establishments along with other variables such as annual income, annual expenditure, number of persons engaged etc.

Before deciding about sampling methodology, the nature and characteristics of NEC 2018 frame was reviewed and considered it as a main frame. Beside main frame, the lists of currently running micro hydro-powers and waste collection/disposal industries were also updated to the main-frame. Those lists were obtained from AEPC and Federation of Waste Collection and Disposal Industries.

### **1.8.2 Stratification**

Separate survey scheme was designed for each section of NSIC covered in the survey. Industries in section B, D and E of NSIC were completely enumerated, in case of section C of NSIC both complete enumeration and sampling method were adopted based on the following criteria.

- For large manufacturing establishments (if number of persons engaged was more than or equal to 10), all establishments were enumerated.
- For small manufacturing establishments (if number of persons engaged was less or equal to 9), sampling method was adopted. However, if number of establishments in each province at 4 digit NSIC level was less than 5, then such establishments were completely enumerated to ensure their representation in the survey.

For small size establishments of section C, three categories were made based on number of persons engaged i.e. 1-2 persons engaged, 3-5 persons engaged and 6-9 persons engaged.

Using these categories, strata were made based on province, NSIC and persons engaged categories. The total number of establishments in the sampling frame for small size establishments of manufacturing section by province is presented in Table A.

**Table A: Total number of establishments in the sampling frame by province and persons engaged category (for small size establishments of section C)**

| Province       | Persons engaged category |               |              |               |

### 1.8.3 Analytical Domain

The survey was designed to provide the national estimates of the NSIC 4 digits classification and provincial estimates of the NSIC 3 digits classification.

### 1.8.4 Sample Size and Sampling Method

The total enumeration size (census and sampling) of the survey was planned to enumerate 14,000 establishments. Out of them, about 9,200 establishments were expected to be enumerated in census category for the NSIC sections B, D, E and large size manufacturing establishments of section C.

For small size manufacturing establishments, a total of 4,738 establishments were fixed as a sample size, which were distributed to each stratum (province, NSIC, persons engaged category) using power allocation with power 0.7. The samples from each stratum were then selected by using systematic sampling method. The summary of sample allocation is presented in the table B.

**Table B: Summary of the allocation of samples in provinces by persons engaged category  
(for small size establishments of section C)**

| Province       | Persons engaged category |                |                |              |

### 1.9 Steering and Technical Committees

Steering and technical committees were formed for smooth operation of the activities of NIS 2019/20. The steering committee was chaired by member of the National Planning Commission (NPC) including members representing from concerned ministries and Tribhuvan University. The main function of steering committee is to facilitate and to coordinate with concerned agencies for successful implementation of the survey. In addition, this committee approved the survey questionnaires and manuals as well. The composition of the steering committee is presented in annex 4A.

National Industrial Survey Technical Committee was also formed with the chairmanship of the Deputy Director General (DDG) of the Economic Statistics Division of the CBS. Representatives from concerned ministries and departments, FNCCI and CNI were the member of this committee. The main function of this committee is to provide technical inputs on the survey such as questionnaire/manual preparation and sample design and recommend them for approvals to the steering committee. The composition of the technical committee is presented in annex 4B.

### 1.10 Survey Organization

The Establishments Census and Survey Section (ECSS), under the Economic Statistics Division of CBS, acted as a central level working team for conducting the survey. ECSS has 2 Directors, 3 Statistical Officers, 1 Computer Officer and 1 Statistical Assistant. The CBS district level offices located at 33 districts played vital role for coordinating with the district level stakeholders and

for successful implementation of the survey. Among the 33 offices, 6 offices were headed by gazetted II class officer and rests were headed by gazetted III class officer.

About 150 enumerators and supervisors were involved for the field work. The field work was conducted about 4 months to collect the data. In total, about 25% of enumerators were hired in contract basis by respective Statistics Offices. The field work of enumerators was supervised jointly by CBS and Statistics Offices.

### **1.11 Trainings**

Various training programs were organized for successful implementation of the survey. This includes MToT, officer level training and supervisor/enumerator level training. CBS conducted a 3 days MToT training program with main objective of preparing the resource persons for the officer level and supervisor/enumerator level training. The participants of the MToT were mainly Directors from CBS.

A five days training was also organized in Chitwan district for Directors and Statistical Officers working in district level offices of CBS. Likewise, Six days training program for supervisor and enumerator was conducted in three separate places; Morang, Chitwan and Banke districts. The theoretical as well as practical aspects of the survey questionnaire were the main contents of the training program.

### **1.12 Field Operation**

Field operation was planned to start at first week of March 2020 (second week of Falgun 2076) and targeted to complete in 4 months. As per schedule, the field operation was started all over the country. But the field operation was completely stopped for the fiscal year 2076/77 (2019/20) due to COVID-19 lockdown from 24 March 2020. Before lockdown approximately 14 percent of enumeration was completed.

The field operation was resumed from first week of October 2020 (second week of Asoj 2077) in the fiscal year 2077/78 (2020/21) with complete adoption of COVID-19 safety protocols. At that time, one more module in questionnaire was added to measure the effects of COVID-19 lockdown in industrial sector.

The second phase of the field operation was also affected by locally induced COVID-19 restrictions in different parts of the country. Due to this situation, the field work was extended for some more months to complete the data collection activity.

### **1.13 Inter-agency Coordination and Publicity**

Coordination among the different agencies is considered as an essential factor for successful implementation of the survey. Publicity campaign is another important aspect which inform and aware the industrialists, the business persons and general public about the importance of industrial statistics on national statistical system. The following activities were undertaken in connection with Inter-agency coordination and publicity campaign of the survey.

#### **a. Inter-agency Coordination**

- A circular was sent by the Ministry of Home Affairs to all the 77 District Administration Offices to coordinate on the field operation of NIS 2019/20 at the district level.
- The Ministry of Federal Affairs and General Administration also circulated to all 753 local levels requesting to coordinate and support enumerators and supervisors during the field work.
- Private sector organizations like FNCCI and CNI requested entire industries and their district level offices to provide accurate and timely information to enumerators.
- A request letter from Director General of CBS was handed over to each establishment to cooperate and support enumerators by providing accurate information in time as outlined in the questionnaire.

#### **b. Publicity Campaign:**

- A central level inception seminar was organized before the field work. Representatives from concerned ministries, departments, FNCCI, CNI and other stakeholder's organization participated in the seminar. The main objective of the seminar was to inform and aware about the ongoing industrial survey.
- Statistics offices organized one day awareness seminar in districts. The main objective of this event was to inform and aware local stakeholders about the ongoing survey.
- Flex print banners were displayed in the CBS as well as in district office premises requesting all concerned institutions to provide accurate information in the survey.

- The radio jingles were prepared and aired by different local FM radio station, including Kathmandu valley. Publicity of the survey was also made through print and social media.

#### **1.14 Data Processing**

After the accomplishment of the field operation, the filled up questionnaires were initially edited by heads of SOs in each district and then collected to CBS for further processing. Five peoples were hired for six months for the editing, coding and entry of the forms. The intensive training on editing, coding and data entry of the collected forms was provided to them. CSPro application was used for data entry. Data analysis and tabulation was done by using STATA as well as IBM SPSS.

Standard coding system adopted by CBS had been used for coding. For industry classification, NSIC version 4 was used at the 4 digit level. Likewise, for product classification, the CPC version 2.1 was used at the 5 digit level. The coding, editing and data entry activities were supervised by officials of the CBS.

#### **1.15 Non Response**

Nearly 3.9 percent of complete non-response was observed in sampling scheme (small size establishment of section C). These non-responses were treated mainly by adjusting the sampling weight. Some partial non responses were also observed in both census and survey.

#### **1.16 Limitations**

- NIS 2019/20 is mainly based on the frame of NEC 2018. An attempt was also made to update the main frame from other official records. Establishments not listed in the updated frame could not be enumerated.
- The survey was conducted amid a difficult situation of COVID-19 pandemic. It affected the duration, cost and responses of the survey.
- The survey was conducted on the basis of the predominant economic activities. Establishments which carry out more than one economic activity and could not separate out their transaction by individual activities such as cement industries which carry out both mining and manufacturing activities. In such cases, if manufacturing is

predominant activity then both mining and manufacturing activities of cement industries were accounted in manufacturing sector.

### 1.17 Summary of Principal Indicators

The National Industrial Survey (NIS) 2019/20, provides the detail information on number of establishments, employments (engaged and employee), wages and salary, value of fixed assets at the end of the year, value of input, value of output and value added. These are considered as principal indicators of the survey. This aforementioned information (statistics) by NSIC Section is presented in Table A.

This survey disclosed the total number of establishments of all industrial section of NSIC (B, C, D and E) is 60,185 where 491,227 persons are engaged at national level. Out of total persons engaged; 381,687 are paid employees and 109,540 are proprietors as well as unpaid family workers. Likewise, the expense on wage and salary of employee is NRs. 107.89 billion, value of fixed assets at the end of the year is NRs. 619.51 billion, and value of output during reference period is NRs. 1201.17 billion. In addition to this, these establishments generated NRs. 354.51 billion as total value added in the reference year. The detail of the principal indicators by its size and NSIC Section are presented in Table C.

Note: 1. Large size establishments-establishments with 10 or more persons engaged. Small size establishments-establishments with 9 or less persons engaged. 2. B-Mining and Quarrying; C- Manufacturing; D-Electricity, gas, steam and air conditioning supply and E-Water supply; sewerage, waste management and remediation activities

The NIS, 2019/20 reveals that there is 23.09% increase in total number of large manufacturing establishments as compared to the previous manufacturing census 2011/12. It is found that the number of large manufacturing establishments has been increased since 2006/07. The top 10 manufacturing establishments (industry), in terms of value added, are Manufacture of food products; Manufacture of other non-metallic mineral products; Electricity, gas, steam and air conditioning supply; Manufacture of basic metals; Manufacture of fabricated metal products,

except machinery and equipment; Other manufacturing; Manufacture of beverages; Other mining and quarrying; Manufacture of chemicals and chemical products; Manufacture of wood and of products of wood and cork (except furniture), manufacture of articles of straw and plaiting materials.

In comparison to last CME 2011/12, the number of establishment in food and beverages; manufacture of wearing apparel; manufacture of furniture; wearing apparel; leather, leather products and footwear; wood products; chemical and chemical products; rubber and plastics products; non-metallic mineral products; fabricated metal products; machinery and equipment; furniture manufacturing n.e.c. have increased. During the same period, number of manufacturing establishments in tobacco products, manufacture of computer, electronic and optical products have decreased.

Similarly, the number of persons engaged and number of persons employed have increased by 41.01% and 40.69% respectively. This increment is most probably due to increased number of establishments. Moreover, data on total wages/salary and other benefits; value of input; value of output; total value added; value of fixed assets have increased in comparison to last CME 2011/12. The principal indicators of NIS 2019/20 along with previous CME results are presented in Table D.

### 1.18 Summary of Performance Indicators

Industrial performance indicators primarily measure the economic efficiency of industrial production with respect to growth of output in relative term of input. These indicators help to evaluate the economic situation of a country and use for planning and implementing an effective fiscal and monetary policy. Industrial performance is an outcome of various social, economic and technological factors. The top three important dimensions of industrial

performance are productivity, structural change, and competitiveness. Among these three dimensions, productivity has been described below.

Productivity is a ratio of volume measure of output to a volume measure of input use or it is derived from the ratio of value of real output to value of input over a period of time. Productivity can be measured in different ways, depending on the definition of output and input components or measures. The following partial productivity indicators are discussed below: Input as a percentage of output, Output input ratio, value added per employee, Value added output ratio, and value added per unit of capital.

**a) Input as a percentage of output:** It measures input per 100 outputs of industrial establishments. Higher the value of the indicator, more use of inputs and lowers the value of the indicator, less use of inputs for producing 100 outputs. The input as percentage of output by section of NSIC is given in Table E. With compare to previous CMEs, the value of this indicator stagnated in CME year 1991/92 and 1996/97 then it has gradually increased in the CME year 2001/02 to CME year 2011/12. Now, it has slightly decreased from 75 percent to 73 percent in the reference year 2018/19 (see Table F).

**b) Output input ratio:** Output input ratio is a ratio of volume of output to the volume of input use. This ratio indicator measures the output per unit of input and also measures the efficiency of use of inputs. Higher the value of indicator indicates the efficient use of inputs, similarly lower the value of indicator indicates the inefficient use of inputs. The Output input ratio of this survey NIS, 2019/20 by section of NSIC, is presented in the Table E.

With association to large manufacturing establishments, the value of this indicator stagnated in CME 1991/92 and 1996/97 then it has gradually decreased in the CME 2001/02 to 2011/12. In NIS 2019/20, it has increased to 1.38 from 1.33 in CME 2011/12 (see Table F).

**c) Valued added per employee:** Value added per employee is a measure of labour productivity in manufacturing. It indicates the average amount of value added produced by an employee. This is the simplest approximation of rate of labour productivity in manufacturing. When labour is more skilled or when more capital is used by labour, this will result in a higher value added. Labour productivity thus provides a mixed measure of labour skills and capital intensity. For consistency checks of the survey results, it is quite common to compute the average value added per person engaged. In total, the average value added per employee of the large size manufacturing establishments is 858 thousands in NIS 2018/19. The detail is presented in the Table E.

With comparison to large manufacturing establishments, the value added per employee and average value added per person engaged of the Census of Manufacturing Establishments (CME)

of the last six CME years are presented in the Table F. This table shows that both value added per employee and per person engaged have been increased gradually till the CME year 2001/02 and then it has been rapidly increased in last three CME years (see Table F).

**d) Value added output ratio:** The value added output ratio measures efficiency of the use of material inputs. It can be calculated at any level (for example: at manufacturing level, at level of sectors and sub-sectors, as well as at enterprise or establishment level). Since it is a ratio between two values, the effects of inflation are nearly eliminated and making the value added output ratio a more stable and robust estimate in comparison with the absolute value of output and input. Thus, it is widely applied in order to check the data consistency in survey results. Value added output ratio of this survey NIS, 2019/20 by section of NSIC, is presented in the Table E.

In connection to large manufacturing establishments, the value added output ratio of last six CME years is presented in the Table F. The value of this indicator stagnated in CME year 1991/92 and 1996/97 but it has a conspicuous declined in each CME year after the CME year 1996/97 to CME year 2011/12. Thus it indicates that inefficiency in the use of inputs (i.e. inputs are a higher proportion of output), unfavorable prices for products and purchases, or poor control of stocks as compare to the first two CME years. But the value of this indicator is increased to 0.27 from 0.25 in CME year 2011/12 (for details see in Table F).

**e) Value added per unit of capital:** It is the ratio of value added to the capital. Here, capital refers to the value of gross fixed assets at the end of reference period. Value added per unit of capital measures the efficiency and effectiveness of fixed assets in the generation of output of industries as well as its sub-sectors. Lower the value of indicator indicates the inefficient use of capital or poor marketing while higher the value of indicator indicates the efficient capital utilization or good marketing. Based on this principal, NIS 2019/20 disclosed the value added per unit of capital is 0.82. The value of this indicator by section of NSIC is presented in Table E.

With comparison to large manufacturing establishments, this performance indicators show that there were more efficient capital utilization or good marketing strategy in all CMEs except CME 2006/07 as compare to CME 1991/92, for details see Table F.

\* The industry classification presented in this table mainly represent the type of industry according to IEA 2076 during registration of the establishments. Manufacturing, mining & quarrying and electricity related establishments which were not registered according to IEA 2076 or which did not report their industry type during the survey, the type of their industry has been classified on the basis of value of fixed assets at the end of the year (small- less than Rs. 10 crore, medium-Rs. 10 to 25 crore and large-Rs. 25 crore or more). The statistics presented here therefore may differ from Department of Industries.

## **Notes to be considered during interview**

1. Fiscal year 2075/76 (17 July 2018 to 16 July 2019) is the reference year of this survey. Questionnaire must be filled for this period. If any establishment has operated only for few months in the reference year, data should be filled only for this operated period. The industrial establishments which started their production since after 16 July 2019, will not fall under the reference year and such establishments should not be included in the survey. But introduction of such establishments must be taken. Data of all types of industrial establishments (as defined in scope) which begins production work during or before the reference year, must be collected.
2. Generally, while taking data on employment, number of persons engaged must be specified according as the attendance register of the establishment on 15 January 2019 (mid day of the reference period). If the establishment is closed at that day, the number of persons engaged will be taken for the next operational day. But in case of wages or salaries, annual amount should be mentioned.
3. If the establishment has not finalised its financial audit at the day of enumeration, information can be obtained from the unaudited financial statements of the establishment.
4. Any answer box of the questionnaire should not be kept blank except for leaving it for official use. A bar "-" symbol should be written for not applicable places and "0" must be written for indicating 0 in price or quantity.
5. Unless otherwise specified, number must be written in English and letter must be written in Nepali.
