Overview

ABSTRACT

The survey was meant to find out the baseline information on vital events registration, to identify the problems and issues in vital events registration and to infer doable recommendations to improve vital events registration in Nepal. The main objective of the survey was to know the trend of vital registration system in Nepal during the years from 2070 to 2072. Sample frame of CRVS survey was constructed from National Population and Housing Census 2011 (NPHC2011). This frame has aggregated ward wise information about House Number, Household Number, male, female and total population. However, the provided frame was based on 2011 administrative boundaries which were reconstructed into new existing administrative boundaries having 217 municipalities during that period. Basically wards were our enumeration area (EA). Major significant factor that has a large impact on the sample size is the number of domains. Domains are generally defined as the analytical sub-groups for which equally reliable data were desired. Domains of the study were 15 ecological development areas and Kathmandu valley altogether 16 domains.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
Household

Scope

NOTES

In this survey, the following events occurred in last three years:

- (1) Children less than three years,
- (2) Households having death,
- (3) Married couple,
- (4) Divorce persons,
- (5) In & out migrated household and
- (6) Adoption of Children.

Sample size depends also on the target population so that the calculation of the sample size must therefore take into

consideration each of the target populations. The resulting sample size was considerably larger than that needed for a target group comprised of all persons or all households.

Coverage

GEOGRAPHIC COVERAGE

The survey covers the whole country (National), Ecological belts (Mountain, Hill, Terai) and Kathmandu Valley.

UNIVERSE

There are several target populations in household surveys. They are:

- (1) Children less than three years,
- (2) Households having death,
- (3) Married couple,
- (4) Divorce persons,
- (5) In & out migrated household and
- (6) Adoption of Children.

Sampling

Sampling Procedure

The survey followed the two stage sampling scheme. In the first stage, probability proportional to size (PPS) sampling scheme was adopted to select the enumeration area (EA) and required number of households was enumerated from selected EAs in final stage. Enumeration areas (EAs) were defined as wards or, in cases where wards contained less than 50 households, combinations of wards. In cases of very large wards, smaller segments were prepared for making sizable EAs. For such wards, the block maps prepared during the 2011 population census were used. First of all, the urban and rural EAs were arranged according to their respective domain with household number. In urban area 673 EAs and rural area 927 EAs, altogether 1600 EAs were selected from 75 districts to further investigation. In each selected EA, 50 households were listed starting from north east corner of EA. If listed household having any vital and migration events in last three years then main questionnaire will be asked to that particular households.

Response Rate

The survey enumerated 99 percent of the sample.

Weighting

The sampling weights for urban and rural domain is calculated separately. Major significant factor that has a large impact on the sample size is the number of domains. Domains are generally defined as the analytical sub-groups for which equally reliable data are wanted. Domains of study were 15 ecological development areas and Kathmandu valley altogether 16 domains.

Questionnaires

Overview

The questionnaire of the survey covered the following areas.

- (1) Children less than three years,
- (2) Households having death,
- (3) Married couple,
- (4) Divorce persons,
- (5) In & out migrated household and
- (6) Adoption of Children.

The questionnaire are published in Nepali language.

Data Collection Notes

Before collecting data of this survey 5 days training for enumerators was conducted in Chitwan, Banke, and Morang districts in different time periods. In order to achieve above objectives, a pilot survey was conducted in Tapalejung, Sunsari, Sindhuli, Kaski, Kailali and Bajhang districts, which also represents two districts in each ecological belt (Mountain, Hill and Tarai). 900 households were interviewed in urban areas whereas 1000 households were interviewed in rural areas for investigation of vital events occurred and their registration time period.

Questionnaires

The questionnaire of the survey covered the following areas.

- (1) Children less than three years,
- (2) Households having death,
- (3) Married couple,
- (4) Divorce persons,
- (5) In & out migrated household and
- (6) Adoption of Children.

The questionnaires are published in Nepali language.

Supervision

Social mobilizers of local levels were used as enumerators for data collection of the survey. The immediate supervision for the data collection work was managed weekly by focal persons of local bodies. The survey concern team of Department of Vital Registration and Central Bureau of Statistics were involved for central supervision.

Data Processing

Data Editing

Data of this survey were collected by using CAPI method by local social mobilizer. A 5 days training for data collection and proper data management were provided to the enumerators before dispatching them to their assigned EAs. The CSPro programme was used for consistency checking data validation.
