#### ABSTRACT

Annual Household Survey 2015/16 (AHS IV) is the fourth of its kind. AHS is conducted to provide estimations of some major socio-economic indicators on an annual basis, which would not be possible with other periodic surveys like Nepal Labour Force Surveys (NLFS) and Nepal Living Standards Surveys (NLSS) which are undertaken at longer intervals. The survey basically aims to provide estimates of consumption and labour force for Nepal by sex, urban-rural area and consumption quintiles/deciles. Although the major thrust of AHS is on consumption and employment situations, other sectors like education, housing and demographic characteristics are also included. As this year NLSS survey is conducted so, this survey does not contain information on employment situation as in previous annual household surveys.

This survey (AHS IV) has used sampling frame of the National Population Census 2011 that has provided the list of wards with the number of households. It has enumerated a total of 300 sample Primary Sampling Unit (PSU) (150 in urban and 150 in rural). The total sample household was 4,500 (2,250 from urban PSU and 2,250 from rural PSU).

A survey was conducted in 10 months from August 2015 to July 2016. Different PSUs of strata were enumerated at different months. Demographic information was collected as of the date of the survey. The reference period of food consumption was a week (last seven days) prior to the date of enumeration. The data of last 7 days was annualized. Non-food consumption and consumer durables refer to the last 12 months from the date of the survey. Questions on time use in economic and non-economic activities of the last seven days were asked for all household members of age 5 years and above.

The general objective of the survey is to provide data required to monitor annual changes in employment, consumption and other socio-economic indicators of Nepal. The specific objectives of the survey are:

1. To measure the changes in the structure and the level of consumption expenditure of Nepalese households,
2. To provide other socio-economic information useful for economic planning and annual budgeting.

#### NOTES

The scope of the survey, based on the objectives above, covers topics such as consumption expenditure in economic,

non-economic and extended economic activities, housing and household facilities, demography, literacy and educational attainment.

## TOPICS

Topic	Vocabulary	URI
Poverty	World Bank	

## KEYWORDS

Consumption and Expenditure

## Coverage

## GEOGRAPHIC COVERAGE

The survey covers the whole country (National), Ecological belts (Mountain, Hill, Terai) and, rural and urban.

## UNIVERSE

- All households in the country determined on the basis of the usual place of their residence (de jure households). The households of diplomatic missions, the institutional households (like people living in schools

hostels, prisons, army camps and hospitals) were excluded from the survey.

- All persons aged 5 years and above household members.

# Sampling

## Sampling Procedure

---

A complete list of wards with number of the households provided by the ward/Enumeration Area (EA) level household data of the National Population Census 2011 was used as the sampling frame for the survey. In 2015, 72 new municipalities were formed, which on adding to the existing 58 municipalities become a total of 130 municipalities. In order to avoid extremity of the size of wards, some big wards were segregated into blocks or enumeration areas (EAs). The sampling frame contained 4,861 EAs in urban and 36,181 EAs in rural areas making a total of 41,042 EAs in Nepal.

It was 300 primary sampling units (PSUs) for AHS IV. AHS IV covered all 300 sample PSUs (150 PSUs in urban and 150 PSUs in rural areas). The total sample household was 4500 (2250 from urban and 2250 from rural) taking 15 households from each selected PSUs. In AHS III the sample size was 4,500 households.

The survey aimed to provide estimates for Nepal as well as urban and rural area, and accordingly, the population was stratified into urban and rural area. Wards or sub-wards (EAs) were the primary sampling units (PSUs). The numbers of PSUs to be selected were 150 from rural and 150 from urban area making a total of 300 PSUs. The sample size was determined on the basis of the sampling variance of previous surveys. PSUs were selected on the basis of probability proportional to the size (PPS), the measure of the size being the number of households in each ward. Selected PSUs were spread over 65 districts.

Households were the ultimate sampling units (USUs) and were selected with equal probability on the basis of two-stage systematic random sampling technique. Fifteen (15) households were selected from each PSUs. Altogether 4500 households were selected for the interview.

In a nutshell, procedures followed to select sample households were:

1. Selection of PSUs based on PPS from the frame,
2. Listing of households in the selected PSU, and
3. Selection of USUs from the updated list of households in the selected PSU.

## Response Rate

---

The survey enumerated 300 (100%) sample households from 300 primary sampling unit 150 PSUs of rural area and 150 PSUs of urban area. Thus, in total 4,500 (100%) households(2250 from urban and 2250 from rural) were enumerated in the survey.

## Weighting

---

The sampling weights for urban and rural domain is calculated separately. In rural domain, data collection was conducted only at 150 PSUs so that actual value of the weight of this domain equals 832.37. In Urban domain, data collection was conducted only at 150 PSUs so that actual value of the weight of this domain equals 1672.58.

# Questionnaires

## Overview

---

The contents of the questionnaire are basically guided by the objectives of the survey. The questionnaire mainly contained household information and individual information. Part 1 of the questionnaire included individual level information using roster and covered questions on demographic characteristics, migration, literacy/education, etc. Parts 2, 3 and 4 covered household level information that consisted of housing, food and non-food consumption expenditure consumption of durables and own account production respectively. The food consumption part of the questionnaire has covered broad food categories only. The household consumption part of the questionnaire has been designed in line with that of Nepal Living Standards Survey.

### Data Collection Notes

First and second annual household survey (AHS) were conducted in team base. But this third and fourth round AHS was conducted by statistics offices (SO). CBS household survey section had selected 300 PSUs samples. The numbers of PSUs to be selected were 150 from rural and 150 from urban area making a total of 300 PSUs. Selected PSUs were spread over -65..... districts. Selected samples list sent to SOs under their working area. SOs managed all field work activities. The training of SOs officers and the field workers were managed all together 10 working days in total. All participants were divided into two groups and two concurrent sessions were executed. Different methods of training were adopted including study of the questionnaire and reference manual, classroom session, class exercise session, mock interviews and field practices and discussions. The core team members of the project had conducted the training. To ensure the perfectness in the data entry independently, supervisors were given access to the laptop having installed data entry program for practice since the first day of the training. During this practice, they were instructed personally by a computer officer who himself had developed the data entry program. On the last day, data entry training program was organized jointly for all participants by grouping them different teams. To collect data in the AHS, SOs were constructed teams according to their workload at the field level. Each team consisted of one supervisor and two interviewers. A survey was conducted in .....10 months from September 2014 to July 2015. Different PSUs of strata were enumerated at different months. After the completion of some PSU, a 5-day review meeting was conducted in two places. Besides the day to day field supervision by the team leader, there was a provision of supervision from the CBS (central level) as well as from Statistics Offices. For this purpose a 5-days workshop com training program was executed for Statistics Office heads. Central level supervisory visits by the core team members of the Household Survey Section carried out immediately after the start of the field work.

### Questionnaires

The contents of the questionnaire are basically guided by the objectives of the survey. The questionnaire mainly contained household information and individual information. Part 1 of the questionnaire included individual level information using roster and covered questions on demographic characteristics, migration, literacy/education, etc. Parts 2, 3 and 4 covered household level information that consisted of housing, food and non-food consumption expenditure consumption of durables and own account production respectively. ### Supervision

In the AHS 2015/16, total 33 Statistics Office of district were constructed at the field level. Each team consisted of one supervisor and two interviewers. Among them, supervisor was responsible for coordinating, supervising and monitoring the field work as a team leader. In addition, he was in charge of completing the community questionnaire, selecting the sampled household, checking and correcting the filled- in-questionnaires and doing data entry activities. Besides the day to day field supervision by the team leader, there was a provision of supervision from the CBS (central level) as well as from Statistics Offices. Central level supervisory visits by the core team members of the Household Survey Section carried out immediately after the start of the field work. At times, central observations were done by the Director General and Deputy Director General of the Central Bureau of Statistics.

## Data Processing

### Data Editing

---

Data entry and data verification of Annual Household Survey 2015-2016 was conducted at field. For this task, a simple and clear data entry programme was developed in CSPro software, and each team was given a personal computer having the entry program so that every team could be able to enter the interviewed household data in the respective field area. In other words, data entry and data verification work was done in the field residing in the corresponding PSU. Therefore both manual and batch editing was carried out and CSPro programme was used for consistency checking.

### Other Processing

---

Data entry and data verification work was done in the field residing in the corresponding PSU using laptop. Entered data was collected on monthly basis and filled-in-questionnaires were gathered from all data collection teams of the Statistics Office. Data processing and analysis was done in the CBS using STATA software package.

Content	The data set includes Information on eighteen durable items used by household. They are collected under durables part (Section 4.2) of the questionnaire. Questionnaire asks, for the list of durable items, the number of such items owned, and number of year passed from date of purchase, and their estimate of the current value. Furniture and livestock were dropped from the list to calculate nominal annual consumption expenditure to be in line with NLSS-III; sixteen items in total therefore are used as durables for consumption calculation.
